INDUSTRIAL SEWING MACHINES

... for Every Purpose!

Job requirements vary — that's why Union Special builds a wide variety of specially designed sewing machines. It is also the reason why Union Special field representatives make a careful study of requirements before giving you detailed recommendations on the kind of equipment to install. Plants equipped with modern, high speed Union Specials have an important advantage. Union Special machines are built to do the job faster . . . better . . . cheaper, and they stay on the job with minimum time out for repairs. You're ahead when you use Union Special.

50000 SERIES MACHINES

The thousands of manufacturers using Union Special's new 50000 SERIES machines are finding these ultra-modern, streamlined models to be invaluable aids in cutting costs of operations and boosting production of a wide variety of products. Each of the many machines in the improved 50000 SERIES is specially designed to do a specific job efficiently, quickly, and economically!

THE 61400 LOCKSTITCH

Never before has a general purpose Lockstitch machine been so thoroughly engineered for handling modern industrial sewing requirements! And never has a machine offered more than the new Union Special SIXTY-ONE-FOUR — a superior machine for light or heavy weight work . . . for short runs as well as long . . . for tacking and back stitching . . . for curved seams and straight runs.

NEEDLE FEED LOCKSTITCH MACHINES

Latest improvements in engineering, manufacturing methods, and materials have been combined in Union Special Class 61800 and Class 62200 needle feed Lockstitch machines providing operators with smooth, streamlined, light-running machines that reduce fatigue and strain. It's no wonder that manufacturers in plants throughout the country are praising the superior performance of these ultra-modern machines!

THE NEW CLASS 39500 OVEREDGER

This new development antiquates every machine presently on the market for use where a curved needle machine is recommended. From its handsome, dynamically functional, modern design to its innermost mechanism, the THIRTY-NINE-FIVE has been produced to accelerate quicker . . . run faster . . . operate more smoothly and quietly . . . with less maintenance . . . and yield a greater profit than any other like equipment available to users today.

35700-35800 FEED-OFF-THE-ARM MACHINES

Union Special's popular feed-off-the-arm felling machines are light running, smooth operating machines that offer great advantages: sewing head of the latest type, new presser bar which practically eliminates feed marking, and presser foot which will lift at the lightest touch. Faster felling is certain with Union Special Class 35700-35800 feed-off-the-arm machines.

INTRODUCTION

In issuing this catalog, Union Special is prompted by a desire to assist the users of its machines in selecting the proper screws and nuts for use in Union Special machines. In this catalog will be found illustrations of the popular Union Special screws and nuts grouped by types, together with a numerical list of these parts. In addition to the numerical list, there will be found a classified list with the parts grouped by thread sizes.

NUMERICAL LIST

This is a complete list of all screws and nuts covered by this catalog. It is set up in ascending numerical order, regardless of type or size of part.

A brief description of the part is given covering the essential information, such as type of screw or nut, thread size, length and the corresponding tap. Obviously, it is impossible to list all the uses of each part, as many of them are used in several different places and on a great variety of machines.

CLASSIFIED LIST

This list is set up with the parts grouped according to thread sizes. These groups are subdivided by types and the types arranged according to length.

THREAD SIZE

The term "thread size", as used in this catalog, refers to the thread size of a screw or nut represented by the external diameter of the threaded portion and the number of thread per inch. It consists of a symbol which has two parts separated by a hyphen. The portion preceding the hyphen represents the external diameter of the screw and the portion following the hyphen represents the number of threads per inch. Example: ".182-40" signifies that the threaded portion of the part is .182 inch in diameter and the threads are 40 per inch. There are two distinct types of symbols used by Union Special to designate thread sizes.

(1) A symbol where the diameter is represented by a decimal figure. Example: ".182-40". These symbols represent exclusive Union Special threads.

(2) A symbol where the diameter is represented by a whole number or a fractional number. Example: "8-32" or "5/16-18". These symbols represent United States Standard threads.

Under each heading in the Classified List will be found a description of the thread size, together with the symbol under which the tap may be ordered. The number and diameter of the drill required for use with each tap are also given.

SCREW ASSORTMENTS

After a careful study of orders, several assortments of the most popular screws have been set up under part numbers 29484, 29484 S, 29484 T, 29484 U and 29484 V.

The assortments come packed in small parts cartons, and for convenience in handling, the headless screws are segregated from the others in separate removable compartments.

The prices of these assortments are considerably less than the cost of the screws if sold separately.

Part No. 29484 consists of an assortment of miscellaneous screws most generally used in servicing Union Special machines.

Part No. 29484 S consists of an assortment of miscellaneous screws frequently used in servicing Union Special machines.

Part No. 29484 T consists of an assortment of screws most generally used in servicing styles in Class 80600.

Part No. 29484 U consists of an assortment of screws most generally used in servicing Style 60000 D.

Part No. 29484 V consists of an assortment of screws most generally used in servicing styles in Class 14500.

The following listing shows the quantities and part numbers of the screws included in each assortment.

Aid Plant Layout! Boost Production!

PEDESTAL MOUNTED MACHINES

UNION SPECIAL'S pedestal mountings for sewing heads have offered a great many advantages to manufacturers ever since they were introduced as a revolutionary new type of mounting for feed-off-the-arm machines in Classes 35700 and 35800.

In the pedestal mounted type installation, the machine is completely isolated from the base and, where table boards are used, they are completely isolated from the pedestal and from the machine, which makes for smoother, quieter operation. In various cases, the motor may be mounted to the right or to the left under the machine handwheel. Mounting of the motor to the right provides maximum space under machine for the operator.

These new pedestals offer maximum flexibility, convenience, and adaptability to production lines, especially where variations in operation or garment styles are necessary from time to time. The foot treadles are adjustable laterally and the machine mounting bracket is adjustable vertically to suit the individual operator and to provide the most comfortable working position, thus reducing fatigue. The illustrations shown here are just a few of the many styles of machines that Union Special has to offer in the pedestal mounted type installation which manufacturers all over the world have found to be necessary equipment for increasing production.

CLASS 35700: This is the feed-off-the-arm tending machine for which the pedestal mounting first was developed. This type installation requires little floor space and provides large working area.

STYLE 52900 BH: For simultaneously seaming and overedging the in-seams and outseams of corduroy pants and similar articles.

STYLE 54200 K: With sewing head overhanging pedestal, this new unit is ideally suited to pants and overall banding.

STYLE 61400 A: The pedestal mounted, plain feed, single needle Lockstitch makes a most flexible and versatile unit for any sewing plant.

STYLE 54200 G: For attaching elastic to boxer shorts and for similar operations. Sewing head can be mounted to overhang pedestal to facilitate work handling.
